

# Shivam Amrutia

I am a computer engineer who aims to leverage my skills and experience in software development, systems design, and project management to contribute to a fast-paced and innovative organization. With a passion for learning and a proven ability to work effectively in cross-functional teams. I am dedicated to continuously improving my skills and knowledge to drive successful outcomes for the organization

## EDUCATION

### B.E. IN COMPUTER ENGINEERING

Darshan Institute of Engineering and Technology  
Semester 5 – 9.2 CPI

### HSC

Shree P.V. Modi School  
70 % , 80 PR

### SSC

Shree V.J. Modi School  
93.5 % , 99.78 PR

## SKILLS

- SDLC Processes
- Proficient in Git and Github
- Project Documentation
- Java
- Fluent in C, C++, and C#
- Agile Development Methodologies
- Proficient in Javascript
- Experienced with Angular and React

## ACCOMPLISHMENTS

- 1st place in hackathone for above mentioned project
- 5 star holder for c++ on HackerRank
- 5 star holder for java on HackerRank

## INTERNSHIP EXPERIENCE

SDE Intern – Rao Infotech

duration - 3 months

location – Rajkot

### Internship Project: CICO (Clock-in Clock-out)

I developed an app using Angular, Firestore, and Ionic Framework to track employees' daily working time and break time. Through this project, I gained proficiency in these technologies and learned how to design and develop a real-world app that solves a problem. The app features a simple interface that allows employees to easily clock in and out of work, start and stop their breaks, and view their daily working hours. Overall, this project showcases my technical skills, problem-solving abilities, and collaborative work style

## PROJECTS

### Road Safety : Hackathone Project

The goal of this project was to create an app that helps to improve road safety. The app was built using .NET 6 Core for the back-end, SQL Server for the database. The app includes features such as accident reporting and real-time weather information. Users can report accidents or hazards they encounter on the road and the app will render those accidents as markers on map for nearby drivers to help them avoid the area. This project taught me proficiency in .NET 6 Core, SQL Server.

## CERTIFICATES

### Data Structures and Algorithms (2022) - FreeCodeCamp

<https://www.freecodecamp.org/certification/kai7/javascript-algorithms-and-data-structures>

### SQL Basic (2021) - HackerRank

<https://www.hackerrank.com/certificates/089b47d57a70>

### Responsive Web Design (2020) FreeCodeCamp
